Test Plan

System: Pallegama Stores — Supermarket POS and ERP System **Document:** 01 — Test Plan **Version:** 1.0

Item	Details
Prepared by (developer)	_____
Tester name	_____
Supervisor	_____
Testing start date	_____
Testing end date	_____

1. What is this system?

This is the computer system the supermarket uses every day. It has two parts:

- **POS (the till):** the cashier uses it to sell items to customers, take cash or card, and print the bill.
- **Back office:** the manager uses it to add products, set prices, buy stock from suppliers, check stock and see reports.

The till program also works **without internet**. Bills made without internet are kept on the till and sent to the main system when the internet comes back.

2. Why are we testing?

We want to make sure the system works correctly for normal supermarket work **before** the real shop uses it.

You do **not** need to know programming. You only need to:

1. Follow the steps written in the test cases (document 03).
2. Compare what happens with the "Expected result".
3. Mark the test **Pass** or **Fail**.
4. Write a bug report (document 05) for every Fail.

3. What to test (in scope)

No.	Area	Simple meaning
1	Login	Opening the system with an email and password
2	POS Checkout	Selling items, discounts, payments, printing the bill
3	POS Shifts	Starting and ending a cashier's working shift, counting cash
4	Returns	Customer brings an item back
5	Offline sales	Selling when the internet is off

No.	Area	Simple meaning
6	Products	Adding items, setting prices, price labels
7	Stock	Seeing stock, damaged stock, stock corrections, low stock
8	Purchasing	Buying stock from suppliers
9	Customers and loyalty	Loyalty customers, points, tiers (Silver / Gold / Platinum)
10	Offers, coupons, vouchers	Discounts and gift vouchers
11	Reports	Sales totals and other reports
12	Cost price rule	The system must not let anyone sell an item below its cost

4. What NOT to test (out of scope)

- The accounting screens (Banking and General Ledger, Fixed Assets, Manufacturing).
- The customer mobile app.
- Speed tests with thousands of users.
- The program code and the database.

5. Testing environment (what you will use)

Item	Details (developer fills in)
Computer	_____
Till program	"Pallegama POS" desktop app, version 0.1.0
Back office address	_____
Receipt printer	_____
Barcode scanner	_____
Internet	Normal Wi-Fi / cable. Some tests ask you to switch it off.

Important: You are testing on a **test copy** of the system, not the real shop. Real money and real customers are never used. If you see real customer names, stop and tell the developer.

6. User accounts for testing

Role	Email	Password	Used for
Admin / Manager	_____	_____	Back office, prices, reports
Cashier 1	_____	_____	POS sales
Cashier 2	_____	_____	Second till / second cashier

Wholesale price PIN (used in test POS-016): _____

7. Documents you will receive

No.	Document	What it is for
01	Test Plan (this one)	Explains the testing
02	User Guide	How to use the system, step by step
03	Test Cases	The list of tests you will do
04	Test Data	The sample products, prices and customers to use
05	Bug Report	Where you write every problem you find
06	Test Summary Report	The final results of testing
07	UAT Sign-Off	The final approval page

8. Testing rules

1. Read the User Guide (02) before you start.
2. Do the tests **in order**. Some tests use the result of an earlier test.
3. Use **only** the sample data in document 04.
4. Follow each step exactly. Do not skip steps.
5. Write down what really happened in "Actual result", even when it passed.
6. If something fails, take a **screenshot** or a phone photo and write a bug report.
7. If you cannot continue a test because of an earlier problem, mark it **Blocked**.
8. Do not try to fix problems yourself. Report them.
9. If you do not understand a step, contact the developer before you guess.

9. Test result words

Word	Meaning
Pass	The result was the same as the expected result
Fail	The result was different from the expected result
Blocked	You could not do the test because something else did not work
Not run	You did not do this test yet

10. How serious is a problem? (Severity)

Severity	Meaning	Example
Critical	The shop cannot work, or money or stock becomes wrong	Sale total is wrong; a bill disappears
High	An important function does not work	Receipt does not print
Medium	Something works, but not correctly	Wrong message, report total is slightly off
Low	A small problem	Spelling mistake, button in a strange place

11. Steps of the testing process

1. The developer prepares the test system, the accounts and the test data.
2. The tester reads documents 01, 02 and 04.
3. The tester runs the test cases in document 03.
4. The tester writes a bug report (05) for every problem.
5. The developer fixes the problems.
6. The tester tests the fixed problems again (re-test).
7. The tester fills the Test Summary Report (06).
8. The supervisor / shop owner signs the UAT Sign-Off (07).

12. When is testing finished?

Testing is finished when:

- All test cases have been run.
- There are **no Critical or High** problems still open.
- The supervisor agrees with the results in the Test Summary Report.

13. Who to contact

Person	Name	Phone
Developer	_____	_____
Supervisor	_____	_____
